

CAM SOLUTIONS

An HCL Technologies Product

CAMWorks is an intuitive, feature-based CAM software that increases productivity by using best-in-class technologies and adaptable automation tools. CAMWorks will allow you to push the limits of your CNC milling centers, turning centers, and multi-tasking machines. 100% integration and associativity with SOLIDWORKS means you will be making better parts, faster, and maximizing your investment in the market-leading CAD/CAM ecosystem.

SOLIDWORKS CAM- powered by CAMWorks - unites the design and manufacturing teams through a common platform. A simpler workflow, in combination with automatic feature recognition, rules-based and tolerance-based machining, and easier file management results in a better CNC experience for everybody - engineers and machinists.

Eureka G-Code and Robot perform a complete 3D-simulation of machine tools and robots through a simple and intuitive graphical interface, starting from the G-code. It is a virtual, risk-free test bed for your CNC equipment.

Eureka G-Code reduces the risk of expensive CNC crashes. No longer will programming oversights damaging expensive work pieces, breaking tools and fixtures, and other types of expenses caused by programming oversights.

Eureka Robot calculates the optimal movements of traditional robotic arms and will detect problems such as singularities, collisions, and out-of-limits.

CAM SERVICES

TRAINING

Our experienced CAMWorks & SOLIDWORKS CAM instructors are ready to help you leverage your CAM investment to its fullest. Get to market faster, with reduced machine cycle times, and greater operation efficiencies. Maximize your ROI with our tailored instruction programs specific to your needs.

SUPPORT

GoEngineer's Annual CAM Support Memberships are now available. Our unique GoEngineer culture is here to serve you long term - not just sell you software.

Get on-demand, extended-hours support from Certified Experts to help ensure your operations run smoothly.

PROJECT MENTORING

Working with a challenging part or tight deadline? Let our CAM experts help you complete your project swiftly and efficiently while sharing tips & tricks along the way. Our online project mentoring includes:

- Discussion of CAM, workholding, and tooling strategies
- Toolpath creation and fine-tuning
- G-code interpretation and review
- Training and best-practice tips throughout the process
